

Pin Description

Pin	Symbol	Function
1	V_S	Supply voltage
2	RF_i	RF input
3	P	Progammig port IP3, CP
4	S_O	Output symmetry
5	IF_O	IF output
6	GND	Ground
7	LO_i	LO input
8	PD	Power down

Functional Description

Supply Voltage

The IC is designed for a supply voltage of 2.7 to 5.5 V. As the IC is internally stabilized, the performance of the circuit is nearly independent of the supply voltage.

Input Impedance

Input impedance, Z_{RF_i} , is about 700Ω with an additional capacitive component. This condition provides the best noise figure in combination with a matching network.

3. Order Intercept Point (IP3)

Voltage divider, R_P / R_1 , determinates both the input and output intercept point, IIP3 and OIP3. If R_P is infinity the IIP3 has the maximum of about -4 dBm .

The IP3/ R_P characteristics are shown in figure 1 and 2.

Output Impedance and Intercept Point

Output impedance is shown in figure 9.

Both low output impedance and a high intercept point are with reference to a high value of R_P .

Current Consumption, I_S

Depending on the chosen input and output conditions of the IC, the current consumption, I_S , is between 4 mA and 10 mA. The current consumption in dependence of R_P is shown in figure 4.

Power Down

This feature provides an extension of battery life. If this function is not used, Pin 8 has to be connected to V_S (Pin 1).

Output Symmetry

The symmetry of the load current can be matched and so be optimized for a given load impedance.

Absolute Maximum Ratings

Parameters	Symbol	Value	Unit
Supply voltage Pin 1	V_S	6	V
Input voltage Pins 2, 3, 7 and 8	V_I	0 to V_S	V
Junction temperature	T_j	125	°C
Storage temperature range	T_{stg}	-40 to +125	°C

Thermal Resistance

Parameters	Symbol	Value	Unit
Junction ambient SO 8	R_{thja}	175	K/W

Operating Range

Parameters	Symbol	Value	Unit
Supply voltage range Pin 1	V_S	2.7 to 5.5	V
Ambient temperature range	T_{amb}	-40 to +85	°C

Electrical Characteristics

$V_S = 3\text{ V}$, $f_{LOi} = 1\text{ GHz}$, $IF = 900\text{ MHz}$, $RF = 100\text{ MHz}$, $R_p = \infty$, system impedance $Z_o = 50\ \Omega$, $T_{amb} = 25^\circ\text{C}$, $R_T = 56\ \Omega$ reference point Pin 6, unless otherwise specified

Parameters	Test Conditions / Pin	Symbol	Min.	Typ.	Max.	Unit

Application

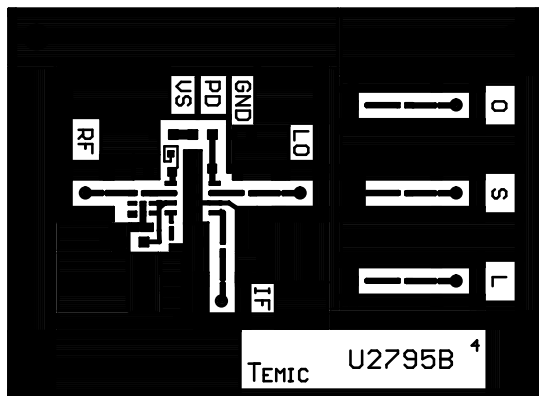

Part List	
C 1	10 nF
C2, C3, C4, C5, C6, C7	100 pF
*R _P	
=====	50-Ω Microstrip
*R _{SO}	68 Ω
— — — —	optional
R _T	56 Ω

With the part list values, the PD settling time is $< 20 \mu\text{s}$. Using other values, time requirements in burst-mode applications have to be considered.

Values of R_{SO} and R_P depending on the input and output condition requirements. For R_{SO} 68 Ω is recommended.

With the optional R_I the intercept and compression point can be slightly increased; values between 500 Ω and 1 kΩ are suitable. Please note that such modification will also increase the supply current.

Ozone Depleting Substances Policy Statement

It is the policy of **TEMIC TELEFUNKEN microelectronic GmbH** to

1. Meet all present and future national and international statutory requirements.
2. Regularly and continuously improve the performance of our products, processes, distribution and operating systems with respect to their impact on the health and safety of our employees and the public, as well as their impact on the environment.

It is particular concern to control or eliminate releases of those substances into the atmosphere which are known as ozone depleting substances (ODSs).

The Montreal Protocol (1987) and its London Amendments (1990) intend to severely restrict the use of ODSs and forbid their use within the next ten years. Various national and international initiatives are pressing for an earlier ban on these substances.

TEMIC TELEFUNKEN microelectronic GmbH semiconductor division has been able to use its policy of continuous improvements to eliminate the use of ODSs listed in the following documents.

1. Annex A, B and list of transitional substances of the Montreal Protocol and the London Amendments respectively
2. Class I and II ozone depleting substances in the Clean Air Act Amendments of 1990 by the Environmental Protection Agency (EPA) in the USA
3. Council Decision 88/540/EEC and 91/690/EEC Annex A, B and C (transitional substances) respectively.

TEMIC can certify that our semiconductors are not manufactured with ozone depleting substances and do not contain such substances.

We reserve the right to make changes to improve technical design and may do so without further notice.

Parameters can vary in different applications. All operating parameters must be validated for each customer application by the customer. Should the buyer use TEMIC products for any unintended or unauthorized application, the buyer shall indemnify TEMIC against all claims, costs, damages, and expenses, arising out of, directly or indirectly, any claim of personal damage, injury or death associated with such unintended or unauthorized use.
